

We do in **DAYS** what others do in **WEEKS!**

EEC Energy Corp. Research Facility - Circle 'D' Farm, Thunder Bay, ON

Analysis on Dairy waste stream used to feed ADvantage System AD Reactor. First set of tests at 6,000L OLR, other tests at 8,000L OLR.

Chemical Oxygen Demand (COD) gauges the effectiveness of the digestion process. The EEC Energy ADvantage System Anaerobic Digester reduces COD levels at least 3 times faster than competing mesophilic systems - reducing digester size requirements and processing time, while increasing performance.
